
OBSTACLE COURSE

This is a 130-yard obstacle course. Applicants will be fitted with a duty belt and plastic handgun before starting the course.

Applicants will start the course from inside a vehicle with the door closed. The course monitor will provide a description of a suspect which the applicant must remember and use while running the obstacle course. Once the applicant opens the car door, the official time will start.

The first essential function the applicant must perform is to climb over a six-foot fence. The applicant must go over, not around, the fence to successfully complete the obstacle.

After clearing the fence, the applicant must follow the course to the second obstacle, four mannequins wearing different clothing. The applicant will be required to use the information they were provided at the beginning of the course to identify a suspect. The applicant must correctly identify the suspect to successfully complete the obstacle.

The applicant will then follow the course to the third obstacle. To successfully complete the obstacle the applicant must pass through, not around, a window frame 30 inches wide x 46 inches high, the bottom ledge of which is 50 inches off the ground.

The applicant then advances to the fourth obstacle consisting of crawling through a circular tunnel/tube 36 inches in height. The applicant must go through, not around, the tube to successfully complete the obstacle.

The applicant will then proceed to the last obstacle. The applicant will be required to pull a 150 pound dummy off of a bench and drag it to a designated line, five feet from the bench. Timing will stop when the entire dummy passes over the line.

The course must be completed in 64 seconds or less.
